### Securing a Facility During a Tornado

Keeping windows secured during a tornado can be accomplished with the same proven technology that's been used for door openings for years. The CURRIES StormPro line Windstorm certified products now includes a window shutter system. It's designed safe rooms that require natural lighting from windows during normal, non-threatening conditions. The CURRIES StormPro Window Shutter meets FEMA and ICC 500 guidelines.

StormPro Window Shutter Systems include a 4-sided StormPro frame unit with StormPro door and hardware. The units are installed inside the room in front of conventional exterior windows. When a severe weather threat occurs, the StormPro Window Shutter is closed creating a level of security equal to an approved storm shelter.

- **New size ranges** as small as 1'8" x 3'0", utilizing heavy duty door and hardware products to withstand the added forces on smaller units.
- **New Multi-Point locking shutter hardware** specifically designed for the unique requirements of shutters including optional lever heights, along with enhanced structural design.
- **New Window Option** which allows the unit to be multi-purpose serving as a shutter and exterior window within the same assembly. This eliminates the need for an additional exterior window and provides the building owner with reduced labor and material costs.

CURRIES is your one convenient source for all door and window building envelope Windstorm certified products. For more information on the StormPro line, visit [www.curries.com](http://www.curries.com) or contact your local ASSA ABLOY Door Security Solutions team.
