

Take Shelter. Hunker Down. Keep Safe.

Don't Let the Wrath of Tornadoes Injure You or Your Colleagues.

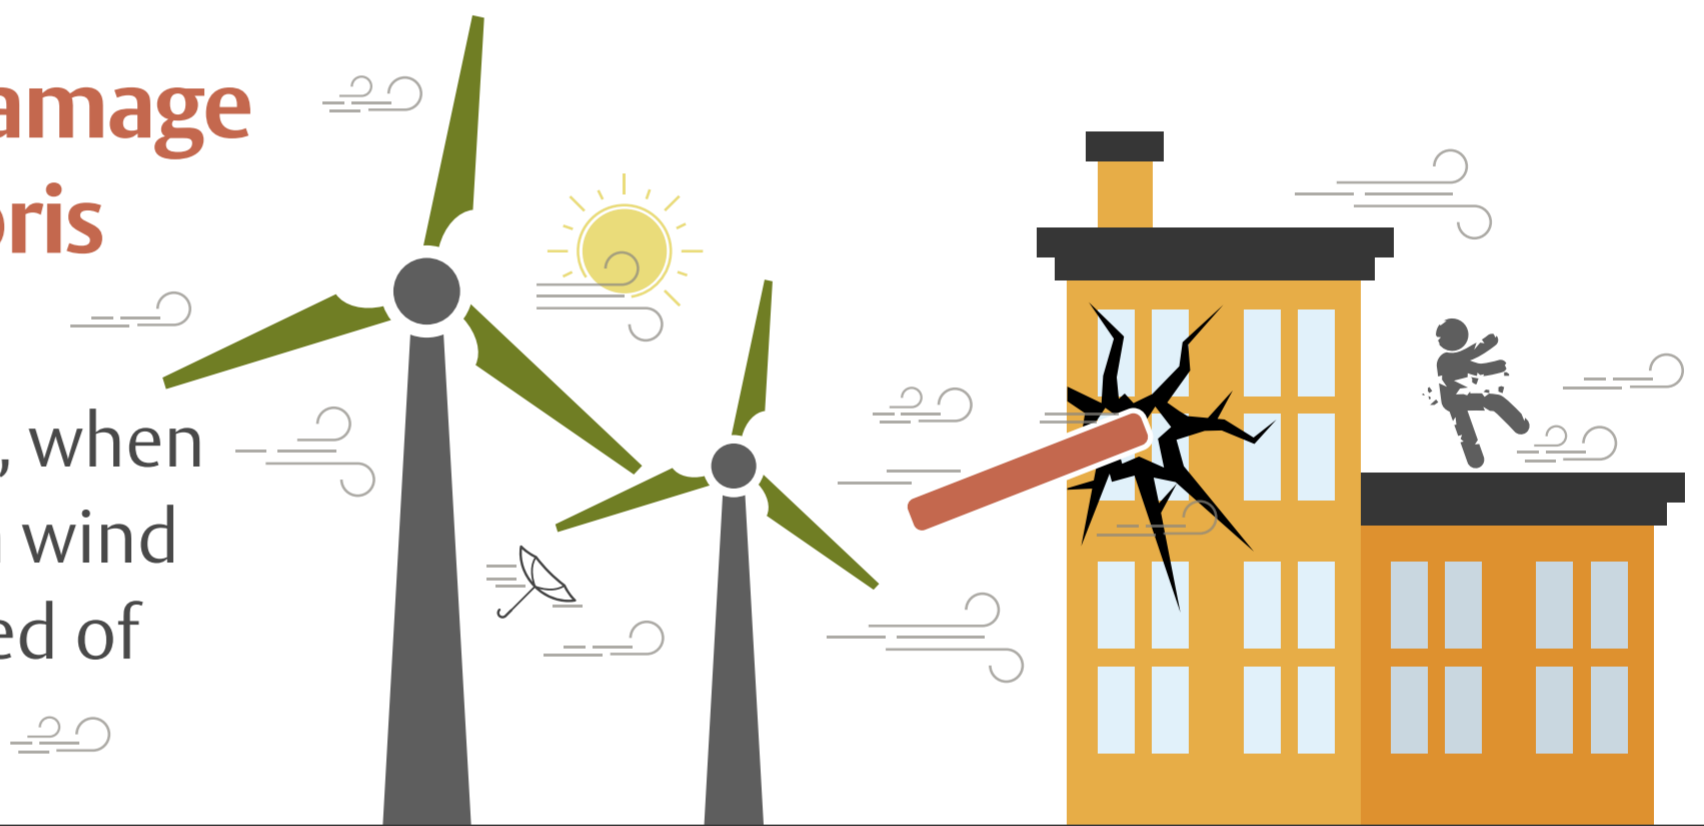

Our Tornado Resistant doors

were developed to resist windborne missiles and flying debris associated with tornadoes, and designed specifically for shelters to protect occupants from injury.

Consider This Damage From Flying Debris

A 2"x 4" wood stud weighing 15 pounds, when carried by a 250mph wind has a horizontal speed of 100mph.

That's enough force to penetrate most common building materials today.

When It's Stormy Out,
You Need StormPro

StormPro 361 and StormPro 320 — assemblies have been successfully tested in accordance with ICC 500, and met all performance criteria as set forth by the ICC 500 test.

StormPro Tornado Shutter — designed for safe rooms that require natural lighting from windows during normal, non-threatening conditions.
